Managing Project Outcomes for Business Impact

Course Overview
The project management discipline has spent decades getting the business comfortable with “projectizing” initiatives for stronger, better and more efficient business processes. More and more we hear from the industry the need for more project leadership, more critical thinking, more identification of the project’s impact to the bottom line. Economic pressures and the ever increasing complexity of projects that drive real business impact is what every business sponsor is focused on. In response to environmental challenges, project managers are increasingly asked to build new organizational capability through the projects they manage every day. Projects become the change agents for the organization to continually move forward. Projects can no longer be done in isolation with a singular focus; they are part of the overall integrated business strategy for the organization.

No longer is it good enough to be a stellar project manager in all aspects of the triple constraint. Project managers are now being asked to:

- Ensure their projects are strategically aligned with strong expectations for very specific business outcomes
- Act as an expert consultant on the project and push back when issues arise that are counterproductive to the organization’s strategy
- Understand the direct business impact of their projects on other departments and the overall organization
- Demonstrate to the business partners how the project strategically moves the company forward and creates real business impact
- Manage up, down and across the organization to insure that the business impact of the project is fully realized and positive business outcomes are realized.
- Move away from a strict discipline of project “deliverables” and move toward project outcomes that have real business impact on the bottom line to maintain an organization’s competitive advantage

“Those involved with project management are now recognizing that the future of project management needs more than stellar technical proficiency, it needs project leadership within a business context.”
Deborah Bigelow Crawford, PMP, President of PM College

Key Outcomes
Upon completion of this course, participants will be able to:

- Identify how project management is evolving in organizations
- Hear best practices from an award-winning organization
- Identify new drivers of project management
- List the four steps for becoming a business driven project manager
- Seek project clarity through stakeholders
